# 1085R CRUZ-AIR

The 1085R Cruz-Air is a state-of-the-art rubber-tired hydraulic excavator/material handler developed for Maintenance of Way (MOW) operations. Cruz-Air speed, gradeability, towing capability and ease of use make the 1085R an asset to your company. Made in the USA.

-  Customize the 1085R to meet your working range requirements with a variety of boom and stick combinations, including auxiliary hydraulics, magnet generator, stick extension attachments, brush cutters, and hydraulic grapple and boom configurations to reach up to 40'.
-  Equipped with rubber tires, the machine can be transported to a job site on its own power, thus eliminating the need for an additional transport truck and trailer. Standard 4-wheel steering and 28,000 lbs. of drawbar pull makes mounting the excavator to the rail easy.
-  Machine controls are conveniently arranged, ergonomically correct and responsive to ensure safe, easy one-man operation on and off the rail in a spacious and comfortable cab.
-  Long-life and easy-to-service hydraulic system offers you more up time. Dash mounted service indicators promote easy routine service functions.

Hydraulic Thumb option adds the ability to easily pick up rocks, debris and stumps, plus flexibility for various material handling jobs.

Quik Attach option allows user to make attachment changes in minutes.

Wrist-O-Twist® option pivots attachment up to 45° in either direction.
